---

## Attendees

Engineering Leadership, SRE, Payments Platform, Identity Platform, Security.

## Agenda

1. Review status of all H1 2026 incident action items.
2. Identify recurring root-cause patterns across the last 12 months.
3. Agree H2 2026 reliability investment areas.

## Discussion

The group reviewed all incidents from the last 12 months (INC-2025-08-14-001 through INC-2026-07-08-006, noting the July incident was still fresh at time of this meeting and added for completeness). Three recurring root-cause patterns were identified across the payments-related incidents specifically:

1. Capacity/resource-limit exhaustion under real-world peak load (INC-2025-08-14-001, INC-2025-10-02-002 indirectly via replication load, INC-2025-12-19-003).
2. Configuration drift silently undoing prior incident remediations (INC-2026-05-11-005 directly repeating INC-2025-08-14-001's root cause).
3. Missing idempotency protection on payment-initiating endpoints (INC-2026-02-27-004, and the related proactive fix opened for Instant Transfer in the March security review).

The non-payments incident (INC-2026-07-08-006, mobile login outage) was noted as a different pattern entirely: silent automation failure with insufficient alerting, which the group agreed is also worth tracking as its own systemic theme across all automated renewal/rotation jobs, not just certificates.

## Decisions

- H2 2026 investment area #1: config-drift detection tooling (already underway per May action items) to be expanded platform-wide, not just payments.
- H2 2026 investment area #2: standardize idempotency key support as a required pattern for all new payment-initiating endpoints, enforced via API design review checklist.
- H2 2026 investment area #3: audit all automated renewal/rotation jobs (certificates, credentials, keys) for silent-failure alerting gaps, prompted by INC-2026-07-08-006.

## Action Items

1. SRE: expand config-drift detection beyond payments platform, target Q3.
2. Engineering Leadership: add idempotency requirement to API design review checklist.
3. Security: lead the automated renewal/rotation job alerting audit, report findings in Q3 postmortem follow-up.
