Overview

Savings Goals lets customers create named sub-accounts within their savings account (e.g., "Vacation," "Emergency Fund") with individual progress tracking, without opening separate formal accounts.

Goals

- Increase savings account engagement and average balance retention.
- Provide visual progress tracking toward customer-defined goals.
- Support optional automated recurring transfers into a goal.

Requirements

1. Customers can create up to 10 goals per savings account, each with a name, target amount, and optional target date.
2. Goals are implemented as sub-ledger tracking within the existing savings account (not separate core ledger accounts), maintained by the Core Banking Integration Layer's Balance Cache with a "goal_allocations" extension.
3. Customers can manually move funds between goals and the unallocated balance at any time, subject to standard savings account transaction limits (Regulation D style, 6 transfers/month in this fictional context).
4. Optional recurring auto-transfer into a goal (daily/weekly/monthly), configured by the customer, executed via a scheduled job.
5. Progress is shown as a percentage and dollar amount toward the target in the mobile and web apps.

Dependencies

- ARCH-core-banking-integration (sub-ledger allocation is an extension of the existing Balance Cache design; does not require new ledger accounts).

Non-Goals

- Goals do not earn a different interest rate than the parent savings account in this version.
- No goal-sharing between multiple customers (e.g., joint savings goals) in this version.

Open Questions

- Should goal funds be excluded from the available balance shown at ATMs / card-linked transactions to prevent accidental spending? Current decision: no, goals are a soft allocation only, not a hold. Revisit based on early customer feedback.
