

Runbook: Card Fraud Alert Triage

Meridian Commercial Bank - Internal Document

doc_id:	RB-FRAUD-004
document_type:	runbook
department:	security
access_level:	internal
created_date:	2025-11-05

Purpose

Describes how the Fraud Operations team triages real-time card fraud alerts generated by the fraud scoring engine, and when to escalate to card blocking or law enforcement referral.

Alert Categories

- Velocity Alert: Unusual transaction frequency on a single card in a short window.
- Geo-Anomaly Alert: Transaction location inconsistent with recent card usage pattern.
- Score Alert: Fraud model score exceeds the configured threshold (default 0.85) for a single transaction.

Triage Steps

1. Review the alert detail in the Fraud Console, including the fraud score contributing factors.
2. Cross-reference recent customer contact history (has the customer reported travel, a lost card, etc.) in the CRM.
3. For Score Alerts above 0.95, or any alert combined with a customer-reported lost/stolen card, block the card immediately and issue a temporary hold; notify the customer via the configured contact method.
4. For Score Alerts between 0.85 and 0.95 without corroborating signals, place a soft hold (next transaction requires step-up verification) and queue for manual review within 4 hours.
5. Document disposition (confirmed fraud, false positive, inconclusive) in the Fraud Console; this feeds back into fraud model retraining.

Escalation

- Confirmed fraud above \$10,000: escalate to Fraud Operations Lead and open a case with the card network's fraud liaison.
- Suspected organized/ring fraud (multiple related alerts): escalate to Security Investigations team and Fraud Operations Lead simultaneously.
